***DETAILED ACTION***

***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 8, 9, 13 and 14 are rejected under 35 U.S.C. 102(b) as being anticipated by Halemeier.

Halemeier shows a main body including a non metallic injection molded plastic external housing (12, column 2, line 41) for erecting and fastening a lighting device and having optical components including at least a light source (column 3, line 36), a reflector (36) and a front glass (70, column 4, line 8) arranged in an optics module which can be attached to the main body for generating a light beam along an optical axis, the optics module rotatably linked to the main body via a pivoting means (46), the optics module swung between an operating position (figure 2) in which it is fixed to the main body and an opened maintenance position (figure 1) giving unimpeded access to the optical components, and the optics module is separable from the main body (note that since the main body and the optics module are formed of separate parts that are linked to each other through separable connection means, the optics module is separable from the main body).

4. Claims 10 to 12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2875

Conradty is cited to show other pertinent optics module rotatably linked to a main body via a pivoting means to swing between an operating position in which it is fixed to the main body and an opened maintenance position giving unimpeded access to the optical components,
